

Weather Alerts Headlines - v3.0

Document Version - 1.3.3

Domain Portfolio: Alerts | Domain: Alerts | Usage Classification: Standard

Geography: US, Canada, Japan, Western Europe, Australia, South Korea

Attribution Required: YES

Attribution Requirements: Clients must provide data source attribution on anywhere data is displayed.

The attribution phrase must display: "Issued by <Office Name> - <Office Admin District Code>, <Office Country Code>, <Source>, <Disclaimer>".

- Example: Issued by National Weather Service - Bismarck, US
- Example: Issued by Central Institute for Meteorology and Geodynamics - Austria, EUMETNET-Meteoalarm, Disclaimer: "Time delays between this website and Meteoalarm.eu are possible. For the most up-to-date information about alert levels as published by the participating National Meteorological Services, please visit Meteoalarm."

Overview

The Weather Alert Headlines API provides weather watches, warnings, statements and advisories issued by the NWS (National Weather Service), Environment Canada, MeteoAlarm (Europe), ABOM (Australian Bureau of Meteorology) and the KMA (Korean Meteorological Agency) . These weather alerts can provide crucial life-saving information. Weather alerts can be complicated and do not always follow consistent standards, format and rules. The Weather Company (TWC) strives to ensure that the information is consistent from all of the different sources but the content is subject to change whenever there is an update from the authoritative source.

The Weather Alert Headline API returns active weather alert headlines related to Severe Thunderstorms, Tornadoes, Earthquakes, Floods, etc . This API also returns non-weather alerts such as Child Abduction Emergency and Law Enforcement Warnings.

The API also provides the <detailKey> attribute which is required to access the alerts details in the Alerts Detail API if additional content is required.

The metadata section of the API response contains the attribute 'next'. if 'next' equals null the user has received all the data and is done. If 'next' is not null the user will need to make additional calls to the Alerts Headlines API - setting the 'next' parameter equal to the previously returned 'next' value. Keep calling the API until 'next' equals null.

HTTP Headers and Data Lifetime - Caching and Expiration

For details on appropriate header values as well as caching and expiration definitions, please see [The Weather Company Data | API Common Usage Guide](#).

Translated Fields:

This TWC API handles the translation of phrases. When formatting a request URL a valid language must be used (see [The Weather Company Data | API Common Usage Guide](#))

- countryName
- disclaimer
- headlineText
- eventDescription
- officeAdminDistrict

URL Construction

Atomic API URL Examples:	Aggregate Product Name	v3alertsHeadlines
Request by Country: Required Parameters: countryCode, format, language, apiKey Optional Parameters: next		
https://api.weather.com/v3/alerts/headlines?countryCode=<countryCode>&format=json&language=en-US&next=<next>&apiKey=yourApiKey		
https://api.weather.com/v3/alerts/headlines?countryCode=US&format=json&language=en-US&apiKey=yourApiKey		
Request by Admin District (State or Province): Required Parameters: adminDistrictCode, countryCode, format, language, apiKey Optional Parameters: next		
https://api.weather.com/v3/alerts/headlines?adminDistrictCode=<adminDistrictCode:countryCode>&format=json&language=en-US&next=<next>&apiKey=yourApiKey		
https://api.weather.com/v3/alerts/headlines?adminDistrictCode=GA:US&format=json&language=en-US&apiKey=yourApiKey		
Request by Area: Required Parameters: areald, countryCode, format, language, apiKey Optional Parameters: next		
https://api.weather.com/v3/alerts/headlines?areald=<areald:countryCode>&format=json&language=en-US&next=<next>&apiKey=yourApiKey		
https://api.weather.com/v3/alerts/headlines?areald=FLC043:US&format=json&language=en-US&apiKey=yourApiKey		
Request by Geocode (Latitude & Longitude): Required Parameters: geocode, format, language, apiKey Optional Parameters: next		
https://api.weather.com/v3/alerts/headlines?geocode=<latitude,longitude>&format=json&language=en-US&next=<next>&apiKey=yourApiKey		
https://api.weather.com/v3/alerts/headlines?geocode=32.69,-83.42&format=json&language=en-US&apiKey=yourApiKey		

Weather Alert Country Coverage and Valid countryCode

Country Name	countryCode	Country Name	countryCode	Country Name	countryCode	Country Name	countryCode
Austria	AT	Finland	FI	Lithuania	LT	Serbia	RS
Australia	AU	France	FR	Luxemburg	LU	Slovakia	SK
Belgium	BE	Germany	DE	Macedonia (the former Yugoslav Republic of)	MK	Slovenia	SI
Bosnia-Herzegovina	BA	Greece	GR	Malta	MT	South Korea	KR
Bulgaria	BG	Hungary	HU	Moldova	MD	Spain	ES
Canada	CA	Iceland	IS	Montenegro	ME	Sweden	SE
Croatia	HR	Ireland	IE	Netherlands	NL	Switzerland	CH
Cyprus	CY	Israel	IL	Norway	NO	United Kingdom	UK
Czech Republic	CZ	Italy	IT	Poland	PL	United States of America	US
Denmark	DK	Japan	JP	Portugal	PT		
Estonia	EE	Latvia	LV	Romania	RO		

Data Elements & Definitions

Note: Field names are sorted alphabetically in the table below for presentation purposes. The table below does not represent the sort order of the API response.

Field Name	Description	Type	Range	Sample	Nulls Allowed
"metadata.object"		object			N
next	Used to paginate responses	integer		1475863030000	Y
"alerts.object"		object			N
adminDistrict	Admin district name	string		Montana	Y
adminDistrictCode	Admin district code	string		MT	Y
areald	Location code for a location where the event occurs.	string		MTC035	N
areaName	Mixed case location name	string		Glacier	N
areaTypeCode	This identifies type of location.	string	C = county Z = zone CLC=Canada Location	C	N

certainty	Certainty text	string	Observed – Determined to have occurred or to be ongoing Likely - Likely (p > ~50%) Possible - Possible but not likely (p <= ~50%) Unlikely - Not expected to occur (p ~ 0) Unknown - Certainty unknown	Observed	N
certaintyCode	Certainty code	string	1 - Observed 2 - Likely 3 - Possible 4 - Unlikely 5 - Unknown	1	N
countryCode	country code of the location	string		US	N
countryName	country name	string		UNITED STATES OF AMERICA	N
detailKey	detail record key	string		77128ec9-cebe-46b2-8d72-d1f6860454e7	N
disclaimer	Disclaimer for data	string		null	Y
displayRank	Suggested display order. See Appendix A	integer		17	N
effectiveTimeLocal	The effective date and time of the information in the alert message.	string	valid date	2017-10-07T12:30:00-05:00	Y
effectiveTimeLocalTimeZone	Time Zone Abbreviation for effective time	string	valid timezone	EDT	Y
eventDescription	Event Description	string		Tornado Warning	N
eventTrackingNumber	Event Tracking Number	string	4 digit number or a checksum	160	N
expireTimeLocal	The expire date and time of the information in the alert message.	string	valid date	2017-10-07T19:30:00-05:00	N
expireTimeLocalTimeZone	Time Zone Abbreviation	string	valid timezone	EDT	N
expireTimeUTC	Expire date and time in UTC	epoch	valid Epoch time	1373914800	N
headlineText	Headline text of an event for the location	string	{event} is in effect {event} until {DOW HH:MM AM/PM TZCODE} {event} from {DOW HH:MM AM/PM TZCODE} until {DOW HH:MM AM/PM TZCODE}	Flood Warning until SAT 12:30PM CDT	N
ianaTimeZone	IANA time code	string	Valid timezone	America/Chicago	Y
identifier	This is the checksum value uniquely identifies a bulletin	string	checksum	a463d8adbd563a981673b1beab2b04994e80078a	N
issueTimeLocal	Alert issuance time	string	valid date	2017-10-07T11:30:00-05:00	N
issueTimeLocalTimeZone	Time zone Abbreviation	string	valid timezone	CDT	N
latitude	centroid latitude of a location where the event occurs.	decimal		48.65	Y
longitude	centroid longitude of a location where event occurs.	decimal		-113.13	Y
messageType	The nature of the alert message	string	New - Initial information Update - Updates existing message Cancel - Cancels the earlier message	New	N
messageTypeCode	The nature of the alert message code	integer	1 - New 2 - Update 3 - Cancel	2	N

officeAdminDistrict	Office Admin District	string		Montana	Y
officeAdminDistrictCode	Issuing Office State Code	string		MT	Y
officeCode	Issuing Office code	string		KTFX	N
officeCountryCode	Issuing Office Country Code	string		US	Y
officeName	Issuing Office Name	string		Great Falls	Y
onsetTimeLocal	The onset date and time of the information in the alert message.	string	valid date	2017-10-07T17:30:00-05:00	Y
onsetTimeLocalTimeZone	Time Zone Abbreviation for onset time	string	valid timezone	EDT	Y
phenomena	Phenomena code of an event	string		TO	N
processTimeUTC	Alert process time in SUN	integer	valid unix time UTC	1475863030000	N
productIdentifier	Product Line Identifier	string		TOR	N
severity	Severity of the subject event of the alert message	string	Extreme - Extraordinary threat to life or property Severe - Significant threat to life or property Moderate - Possible threat to life or property Minor – Minimal to no known threat to life or property Unknown - Severity unknown	Severe	N
severityCode	Severity code of the subject event of the alert message	integer	1 - Extreme 2 - Severe 3 - Moderate 4 - Minor 5 - Unknown	1	N
significance	Equated to Type - such as a Watch, Warning or Advisory	string		W	N
source	Originating source of alert	string		NWS	N
urgency	Urgency text	string	Immediate - Responsive action SHOULD be taken immediately Expected - Responsive action SHOULD be taken soon (within next hour) Future - Responsive action SHOULD be taken in the near future Past - Responsive action is no longer required Unknown - Urgency not known	Expected	N
urgencyCode	Urgency code	integer	1 - Immediate 2 - Expected 3 - Future 4 - Past 5 - Unknown	2	N
endTimeLocal	the date and time that a alert is expected to end. It may be null for indefinitely long events (in which case the headline will indicate that the event is “in effect”)	string	Valid date	2021-10-04T16:30:00-04:00	Y
endTimeLocalTimeZone	the time zone for endTimeLocal	string	Valid timezone	EDT	Y
endTimeUTC	the end date and time in UTC	integer	Valid unix time UTC	1633379400	Y
"category.object"		object			N
category	The category description of the subject event of the alert message	string	Geo - Geophysical (inc. landslide) Met - Meteorological (inc. flood) Safety - General emergency and public safety Security - Law enforcement, military, homeland and local/private	Met	N

			security Rescue - Rescue and recovery Fire - Fire suppression and rescue Health - Medical and public health Env - Pollution and other environmental Transport - Public and private transportation Infra - Utility, telecommunication, other non-transport infrastructure CBRNE – Chemical, Biological, Radiological, Nuclear or High-Yield Explosive threat or attack Other - Other events		
categoryCode	The code denoting the category of the subject event of the alert message	integer	1 - Geo 2 - Met 3 - Safety 4 - Security 5 - Rescue 6 - Fire 7 - Health 8 - Env 9 - Transport 10 - Infra 11 - CBRNE 12 - Other	2	N
"flood.object"		object			Y
floodCrestTimeLocal	Flood Crest date time	string	valid date	2017-10-07T21:30:00-05:00	Y
floodCrestTimeLocalTimeZone	Flood crest date time zone abbreviation	string	valid timezone	EDT	Y
floodEndTimeLocal	Flood End date time	string	valid date	2017-10-07T23:30:00-05:00	Y
floodEndTimeLocalTimeZone	Flood end date time zone abbreviation	string	valid timezone	EDT	Y
floodImmediateCause	Flood Immediate Cause description	string	Excessive Rainfall Snowmelt Rain and Snowmelt Dam or Levee Failure Ice Jam Glacier-Dammed Lake Outburst Rain and/or Snowmelt and/or Ice Jam Upstream Flooding plus Storm Surge Upstream Flooding plus Tidal Effects Elevated Upstream Flow plus Tidal Effects Wind and/or Tidal Effects Upstream Dam or Reservoir Release Other Multiple Causes Other Effects Unknown	Excessive Rainfall	Y
floodImmediateCauseCode	Flood Immediate Cause code	string	ER Excessive Rainfall SM Snowmelt RS Rain and Snowmelt DM Dam or Levee Failure IJ Ice Jam GO Glacier-Dammed Lake Outburst IC Rain and/or Snowmelt and/or Ice Jam FS Upstream Flooding plus Storm Surge	NO	Y

			FT Upstream Flooding plus Tidal Effects ET Elevated Upstream Flow plus Tidal Effects WT Wind and/or Tidal Effects DR Upstream Dam or Reservoir Release MC Other Multiple Causes OT Other Effects UU Unknown		
floodLocationId	Flood Location Identifier code	string	Any Valid NWS flood location identifier	SMBM8	Y
floodLocationName	Flood Location Identifier Name	string	Any valid NWS flood location identifier or N/A	Saint Mary River at International boundary	N
floodRecordStatus	Flood Record Status description	string	A record flood is not expected Near record or record flood expected Flood without a period of record to compare For areal flood warnings, areal flash flood products, and flood advisories (point and areal) N/A	Near record or record flood expected	N
floodRecordStatusCode	Flood Record Status code	string	NO A record flood is not expected NR Near record or record flood expected UU Flood without a period of record to compare OO For areal flood warnings, areal flash flood products, and flood advisories (point and areal)	NR	Y
floodSeverity	Flood Severity Description	string	None N/A Minor Moderate Major Unknown	1	Y
floodSeverityCode	Flood Severity Code	string	N None 0 N/A 1 Minor 2 Moderate 3 Major U Unknown	0	Y
floodStartTimeLocal	Flood Start date Time	string	valid date	2017-10-07T20:30:00-05:00	Y
floodStartTimeLocalTimeZone	Flood start date time zone abbreviation	string	valid timezone	EDT	Y
"responseTypes.object"		object			N
responseType	Description of action recommended for the target audience	string	Shelter – Take shelter in place or per instruction Evacuate – Relocate as instructed in the instruction Prepare – Make preparations per the instruction Execute – Execute a pre-planned activity identified in instruction Avoid – Avoid the subject event as per the instruction Monitor – Attend to information sources as described in instruction Assess – Evaluate the information in this message. (This value SHOULD NOT be used in public warning applications.) AllClear – The subject event no longer poses a threat or concern and any follow on action is described in <instruction> None – No action recommended	Evacuate	N
responseTypeCode	The code denoting the type of action recommended for the target audience	integer	1 - Shelter 2 - Evacuate 3 - Prepare	2	N

			4 - Execute 5 - Avoid 6 - Monitor 7 - Assess 8 - AllClear 9 - None		
--	--	--	---	--	--

JSON Sample Note: Sample response collapsed for presentation purposes.

The metadata section of the API response contains the attribute 'next'. If 'next' equals null the user has received all the data and is done. If 'next' is not null the user will need to make additional calls to the Alerts Headlines API - setting the 'next' parameter equal to the previously returned 'next' value. Keep calling the API until 'next' equals null.

Tsunami Zones Exceptions:

Tsunami warnings are issued by **Joint Australian Tsunami Warning Centre (JATWC)** for Australian coastal locations and offshore territories. It also issues warnings for Antarctica. Below are some of the locations for which country code is not Australia for which JATWC issues tsunami warnings.

Islands in Australia:

These have a different ISO code than mainland Australia. It should be noted that when using “Alerts By Country” API and using code as “AU” will not return alerts for these islands.

Zone ID	Zone Name	Zone Type	ISO Country Code	Geocode
CC_TW001	Cocos Island	Tsunami	CC	-12.1131, 96.8830
CX_TW001	Christmas Island	Tsunami	CX	-10.4132, 105.6670
NF_TW001	Norfolk Island	Tsunami	NF	-29.0624, 167.9330
NSW_PT245	Norfolk Island	PointPlaces	NF	-29.0389, 167.9408

Antarctica:

For these locations, Location Master will not resolve the geocode to any location. There are no mappings defined for these geocodes and therefore “Alerts By Geocode” will not return any data for these locations. Alerts will return data for these locations when using “Alerts By Country” and “Alerts By Area”.

Zone ID	Zone Name	Zone Type	ISO Country Code	Geocode
AQ_TW001	Antarctica	Tsunami	AQ	-67.6012, 62.8752
AQ_TW002	Antarctica	Tsunami	AQ	-66.2820, 110.5230
AQ_TW003	Antarctica	Tsunami	AQ	-68.5769, 77.9671

Appendix A : displayRank

This is an internal ranking by The Weather Company based on multiple factors that can change. It is not an official ranking by the government agencies from which these alerts originate. This field is intended for The Weather Company Properties. Use of the field is solely at your own risk.

displayRank provides a suggested display order for alerts when more than one alert is active for a location. For example, in a list view on an application, alerts with a lower displayRank integer value (ex: 17) would be listed first followed by alerts with a higher displayRank integer value (ex: 207). You should retrieve all Alerts (repeated calls to the API until next is null) prior to sorting by displayRank.

displayRank is populated for all location query types (country, state, areald and latitude/longitude) but is intended primarily for use with latitude/longitude based queries.

You should not make any assumptions regarding a displayRank association to a specific event type - these associations will change without notice as we add new products.
